INTERESTS

I'm interested in learning about and tackling hard problems by analyzing, designing, building and evaluating software systems. My current research focuses on building secure systems.

EDUCATION

Ph.D. Candidate co-advised by Peter Druschel & Deepak Garg

Max Planck Institute for Software Systems, Saarbruecken, Germany

Ph.D. Candidate mentored by Holger Hermanns

2009 - 2010

Saarland University, Graduate School, Saarbruecken, Germany

Bachelor of Science in Applied Computer Science

2006 - 2009

Baden-Württemberg Cooperative State University Stuttgart (DHBW Stuttgart) with IBM Germany

Thesis: "Distributed Complex Query Processing for Informix Dynamic Server"

GPA: 1.5 (scale 1.0 to 5.0), First Class, Top 10%

SKILLS

C, Java, Distributed & Storage & Operating Systems, Secure System Design, Trusted Computing, SSD/Flash Memory, Linux, Memory Isolation

ACADEMIC HIGHLIGHTS **Ph.D. Candidate** advised by Peter Druschel & Deepak Garg

2010 - Present

ERIM: Secure, Efficient in-process isolation with Memory Protection keys [USENIX Security'19]

Isolating sensitive state and data can increase the security and robustness of many applications. Examples include protecting cryptographic keys against exploits like OpenSSL's Heartbleed bug or protecting a language runtime from native libraries written in unsafe languages. ERIM, a novel technique that provides hardware-enforced isolation with low overhead on x86 CPUs, even at high switching rates.

Guardat: Enforcing data policies at the storage layer [EuroSys'15]

In today's systems, policies protecting stored data and mechanisms for their enforcement are spread across many software components, increasing the risk of violation due to bugs, vulnerabilities and misconfigurations. Using Guardat, users, developers and administrators specify file protection policies declaratively, concisely and separate from code, and Guardat enforces these policies by mediating I/O in the storage layer.

INDUSTRIAL EXPERIENCE

Research Scientist at Intel Labs

April'19 – now

Intel Labs. Hillsboro. OR

Research and improve security technologies. Build prototypes and provide guidance to their technology transfer. Current focus lies in building secure, accountable machine learning training and Function-as-a-Service prototypes, and memory protection techniques.

Research Software Engineering Intern

Summer 2014

Microsoft Research, Redmond, WA

Research opportunities to overcome performance and flexibility issues with Trusted Platform Modules (TPM) using Intel's new Software Guard Extension (SGX). Build and evaluate a prototype implementation. Mentor: Ronald Aigner (Principal Research Engineer)

Software Engineering Intern/Bachelor Thesis

2006 - 2009

IBM, Boeblingen, Germany & Austin, Texas, USA

Analyzed, designed and implemented prototypes. From optimizing distributed queries in Informix Dynamic Servers (IDS) to providing new programming models for heterogeneous processor architectures like the Cell/BE.

Publications ERIM: Secure, Efficient In-process Isolation with Memory Protection Keys
